

ABSTRACT OF THE DISCLOSURE

An apparatus for holding and storing tools in a vehicle, including a storage body shaped to fit inside the hub of a spare wheel. The storage body has a jack storage space for securely holding a vehicle raising jack, a lug wrench-receiving space for securely holding a lug wrench and a hollow storage well for holding and storing one or more various user-selected tools or
5 accessories. The storage well has a volume approximately as large as said jack storage space. The storage well may be substantially crescent shaped in cross section and extends substantially the full depth of the storage body for thereby providing a relatively large storage space in a otherwise restricted area of a vehicle trunk. Optionally, tools may be added to the storage body, and fitted into the appropriate storage spaces therein, to form a compact tool kit and storage
10 receptacle for a vehicle.
